

Door Loops & Key Switches

Our range of door loops are offered to suit all applications and budgets. All our loops are surface mount, with the exception of the CDL which provides a neat and more secure solution to transferring cables from a frame to a door/gate leaf.

Concealed door loop

Our key switches offer a secure means of overriding an electronic locking device. We have many models available, with matching keys (key to like) or different keys (key to differ). For more secure environments, we also supply a Euro Profile key switch, which again can be supplied as key to like or key to differ - additionally, it can be suited to match existing Euro Cylinders already installed on a site.
