

Access Control for Homes, Apartments, and Gated Communities

Overcoming your on-site challenges

Your Challenge	Our Solutions	Your Benefits
Residents need complete confidence that only authorised people can enter the property.	• Use a GALEO keypad to give each resident their own access code, without having to rely on physical keys.	Greater confidence in day-to-day security. No risk of physical keys being lost or stolen.
Visitors, carers, contractors, and delivery drivers need access without compromising resident security.	• Create temporary codes for a GALEO keypad through the smartphone app, and share them with approved visitors for controlled access.	Visitors can be managed and welcomed without sharing residents' permanent codes.
Residents can't see who is at the main entrance if they have a long driveway or a gate blocking the view.	• 2EASY video entry provides one-way video and two-way audio so that residents can see and speak to visitors before granting them entry.	Better visibility of visitors, meaning decisions about whether to let them enter or not are more informed and safer.
Residents want to manage visitors even when they are not at home.	• With compatible 2EASY devices, the VDP Connect app allows residents to receive calls on their phone and unlock the door remotely.	Better flexibility for residents to manage access for visitors, deliveries, and contractors even when they're away from home.
Apartment buildings need one entrance system that will serve multiple individual units.	• Use 2EASY video entry with multi-way door stations to manage entry for up to 256 apartments from one main door.	Scalable entry solution for both small and larger apartment buildings. Residents can see and speak to visitors and grant or deny access without having to walk to the main entrance.
Shared car parks or gated communities need easy resident access without weakening perimeter security.	• U4GO vehicle detection credentials identify authorised residents and activate the gate to open when the vehicle approaches.	Hands-free access means residents can gain access without lowering the window or getting out of the vehicle. Only vehicles equipped with valid credentials can gain access.
Different entrances and different users require different access methods.	• Combine a range of solutions to suit each entrance and each user individually. Hand-held transmitters, keypads, video entry, and vehicle detection are all great options.	A tailored solution that meets the needs of residents, visitors, deliveries, contractors, and vehicles.

Access solutions should look professional and attractive and not make the site appear under surveillance.	GALEO keypad is available in silver or matte black to suit different environments. It also has a Zamak alloy body, vandal resistant fixings, and remote electronics to ensure reliable outdoor use.	Discreet hardware that blends into the surroundings. Robust construction that reduces damage from weather and tampering.
Installers and property managers need systems that are straightforward to configure and maintain.	We have many solutions with smartphone assistance to make programming easier, such as GALEO keypads and CUBE X radio receivers.	Faster commissioning and an easy way to make ongoing changes. Less disruption for residents during installation and less time spent managing access to the site.
Residents and property managers need predictable and reasonable running costs.	2EASY video entry requires no ongoing subscription fee or cloud storage costs, while keypad codes and vehicle detection systems control the costs of constantly replacing cards and keys.	Install and ongoing costs that are simple and understandable for property managers and residents. Less reliance on physical keys that need to be issued, collected, cancelled, and monitored.
